Subject : Attestation

For Mrs HAULLE,

Regarding your request for absence of compounds of animal origin and compliance of our film with Decision 2000/418/EC regulating the use of material presenting risks as regards transmissible spongiform encephalopathies:

Our raw material suppliers declare that additives used and which are certified for food contact use, were produced following the law and that even if they contain substances of animal origin, these additives are subjected to multiple treatments at high temperatures and high pressures which are methods of inactivation of TSE agents.

Moreover plastics during their production and processing are subjected again to high temperatures, which eliminates the risk of BSE contamination.

Best regards.

Y. RUEL
Quality manager
